Business Overview Draft 6, 2014-09-29

Juntos Energy, Inc. (JE World)

Mission

To make available worldwide the C4 kiln and related technologies for the creation of char, heat and residuals from diverse biomass.

Objectives :

R&D of C4 Kiln (including related technologies and fuels)
Licensing of rights for the use of C4 kilns.
Providing plans and instructions for C4 kilns to license holders.
Conducting and promoting discussions about C4 kilns on Internet fora and other media. (These may be restricted according to different levels of commitment and licenses.)
Business arrangements with partners and/or associates organized by countries or themes.
Retaining rights and developing projects about carbon credits, carbon negative society, etc.
Conducting businesses of renewable energy, char, biochar, fuels and related activities.
Consulting

Technology

From dry biomass, char is produced by heat from controlled oxic-flaming of some pyrolytic gases, with the char saved in an anoxic environment from which it can be extracted as necessary, allowing continual operation by the addition of more fuel. The heat and any uncombusted gases exit the device in channeled ways, available for appropriate usage. This is further explained in other entries.

Patent Pending status and the Juntos Energy business structure:

The C4 kiln (oven, device, process, technology, etc.) has "patent pending" status under USA and international laws [Paris Treaty]. Juntos Energy, Inc (JE World) owns the documentation and other intellectual property being made available under various licenses and business agreements. The company name, "Juntos", literally means "Together" in Spanish and Portuguese. The task is so large, we really do need to work together. Thank you for your understanding and cooperation.

Warnings, Safety, and Disclaimers:

Be advised that the C4 kiln technology can produce vast amounts of heat that can be dangerous to persons and property. Even when further insulation and protection is added to the systems, serious contact burns are possible. In areas of close proximity to the device, the heat has been known to damage the coatings on some eyeglasses. Note: The C4 technology does NOT involve pressurized components such as boilers, so there is not any normal danger of explosions.

Safety is the responsibility of everyone. Juntos Energy, Inc. and its associated entities and persons are not responsible for damages and injuries. Keep all combustible materials away from the kilns.

Seven Categories of License Arrangements:

To show the seven categories of license arrangements, the array below has "Size and Complexity" on the X-axis, and "License Arrangements" on the Y-axis. Sizes include Small (volume under 250 liter (<60 gallon)), Medium (250 to < 1000 liter (<220 gal.)), Large (1000 to < 5,000 liter (<1000 gal.)), Mega (> 5,000 liter) and Specialty Units associated with specific operations and applications.

The seven categories of License Arrangements correspond to production sizes of single units, limited production (such as < 10 per day), industrial production, national partners / associates, and the international / world entity. Definitions and terms are subject to change without notice, but changes are not retroactive to existing licenses. See the additional notes for further explanations of the different cells and options.

<table>
<tr><th></th><th></th><th colspan="4">Size and Complexity of Units</th></tr>
<tr><td rowspan="6">License Arrangements</td><td></td><td>Small Units: Barrel & smaller (<250 liter (<60 gal))</td><td>Medium units: (250 to < 1000 liter (<220 gal.))</td><td>Large units: (1000 to < 5,000 liter (<1000 gal.))</td><td>Mega sizes & Specialty Units</td></tr>
<tr><td>Single-unit production</td><td>1A. DIY users: First license is free. Required registration.
1B. All others: US$25.</td><td colspan="2">2. Innovators & experimenters: Licenses are negotiable and encouraged for the advancement of renewable energy and biochar.</td><td>6. Special entities: Grants & special projects are negotiable.</td></tr>

Issues licenses, etc concerning IP associated with C4 kiln technology. (JE World is the licensed agent for Paul S. Anderson, originator of C4 technology.)</td></tr>
</table>

Seven Categories of Licenses: [Refer to above chart.]

Note 1: Registration is required for ALL C4 units (regardless of free or paid licenses) for purposes of research, development, monitoring and evaluation, and support communications. Registration is at: www.woodgas.com/registration

Note 2: Information and communication services are provided by JE World to all licensees, according to their category of license. For producers of the units, this includes plans and up-dates. At their appropriate levels, these licensees will selectively share expertise with others in separate geographic areas of operations around the world, thereby accelerating the spread of advances. Working together (juntos) brings more advantages more quickly to more people.

Note 3: Juntos Energy International is NOT seeking to be a manufacturer or to have centralized business control, but it does want units produced by others to be licensed and registered. Together we can build and strengthen local businesses.

1A. DIY Users:

Do-It-Yourself (DIY) status refers to individuals only; a person who personally makes one small unit is granted a free license, but is still required to register the unit. This free license does NOT apply if the unit is made by someone else, purchased or if the labor was hired to make the unit.

1B. Other Non-commercial users:

All others, especially established entities that have operational budgets, are expected to make a payment of US$25 to Juntos Energy, Inc. per unit of the Small size. [see payment instructions]. Requests for fee reduction or waiver will be considered; request forms are at www.woodgas.com/registration .

2. Innovators and experimenter with single units:

JE World wants to encourage further experimentation and innovation utilizing the C4 kiln technology. Your investments of time, talent, and funds are appreciated and, upon success, can be rewarded. Payment for use of C4 technology can be in many forms, including the development of additional markets and products. All innovators and experimenters are required to contact JEC and negotiate for the use of a license. Innovators and experimenters can obtain access to a special forum moderated by JE World for discussion of furthering the C4 technology, including easier access to Dr. Paul Anderson, the originator of C4 kiln and processes.

3. Artisans and Small Entities producing Small and Medium C4 devices:

Because many potential users want the heat and/or char, but do not want to fabricate a C4 kiln (in any of many configurations), there are business opportunities for those who can produce the C4 products in local areas. Local small producers can obtain licenses that permit commercial production. Licensees for small production will have access to additional (restricted) information for making the C4 products.

4. Industrial manufacturers, dealers and associates for large volume business:

JE World wants to enlist (via license agreements) the under-utilized production and management capacity of existing businesses in their geographic areas of operations, especially for the more advanced units with larger sizes, capabilities, and degrees of automated operations.

5. National Partners and Associates:

a) Juntos Energy International is establishing numerous independent companies for coordination of business activities in specific geographic areas, mainly at the national level. Called Juntos Energy [name of country] or simply JE National, these companies are primarily locally owned and operated, but all have similar license agreements with JE World.

b) Each JE National entity has responsibilities within its geographic area to:

Fulfill the Mission "to make available the C4 kiln and related technologies for the creation of char, heat and residuals from diverse biomass."

Support the communications efforts to the licensees, including training sessions and translations of documinto local languages where needed.

Cooperate with and assist all manufacturers (including artisans, small entities, and industry) within its territorial jurisdiction.

Establish and enforce standards of product quality. The JE National entity has control of the licenses to all manufacturers in the geographic area of each JE National company.

Be involved in obtaining, controlling and enforcing of any patent and other IP rights, as assigned to it by agreement with JE World. Therefore, patent issues will be resolved within each country with the JE National company as the owners, defenders, and benefactors of IP-protected activities.

c) Until an appropriate JE National entity is established in a region, JE World office is the only provider of licenses. Once established, each JE National shares in the income from license fees and other related activities.

d) Each JE National entity will be owned by at least three persons or entities with minority shares, one of them being JE World (or Paul S. Anderson). No single person or entity (or close combination) will have majority control of any JE National company. Even if some of the Recognized Manufacturers are part owners of the JE National company, they cannot have controlling interest. Therefore, at least two owners totaling more than 50% must agree on corporate actions.

e) There are common links between the various JE National entities because of the licenses from JE World plus the partial ownership by JE World (or Paul S. Anderson) ine each JE National entity. This is to stimulate sharing and to encourage development and progress for the shared mutual global mission of JE International. The diverse JE National companies will be linked via restricted access Internet resources (Forum, website, etc) for sharing of mutually beneficial information, under the coordination of JE World and Paul S. Anderson.

6. Special Entities:

a) Mega projects and specialty uses of C4 technology are not placed under the other categories of licenses, and are arranged directly with JE World. Such circumstances could include large thermal power installations, urban central heating districts, large agro-environmental projects, carbon credits, biochar, production of bio-fuels, special R&D, government contracts, and international activities. These are beyond the scope of management, decision-making, investment, legislation, etc capabilities of the other categories of licensees.

b) Care will be taken to protect the interests of other licensees and the public at large.

7. Juntos Energy, Inc (JE World):

a) JE World retains control of all licenses in all geographic areas that are not placed under the control of a separate JE National company.

b) As of September 2014, JE World is owned solely by Paul S. Anderson (PSA), the originator of the C4 kiln technology and the holder of all rights and assets, not limited to IP of copyrights and patent applications.

c) Utilizing his network and reputation as Dr TLUD for his role in bringing micro-gasification technologies and products to the world, PSA intends to have social as well as commercial balance within the ownership of each JE National company. PSA is able to offer balanced ownership shares to nationally involved NGOs and companies and individuals that are carefully selected to operate each JE National company for the best and balanced good of society, while protecting viable sustainability and responsibility.

d) Juntos means Together. Do not make fences to keep others out. Our mission is to expand any fences to include others who wish to join us.

Summary:

As the owner of Juntos Energy Inc. and originator of C4 kiln technology, PSA intends to accomplish the following via the JE World and JE National structure:

1) Assure that simple plans and instructions for the small (barrel size) C4 kiln are available with a free license to individuals worldwide, including the poorest of the poor.
2) Encourage further innovation and experimentation, for the advantage of all.
3) Encourage and protect artisans and small enterprises for the production of the basic units in their local areas.
4) Encourage and support the entrance of industry and business to utilize established capabilities to come up to scale for efficient, high quality, and volume production.
5) Establish an international network of independent JE National companies with restricted geographic territories.
6) Establish large special projects and promote their replication.
7) Utilize appropriate Internet sharing of information via restricted-access resources and peer-groups, resulting in rapid cooperative sharing and spread of improvements/ innovations.
